

Social health insurance actors, structures and regulation in western Europe – any lessons for CEE countries?

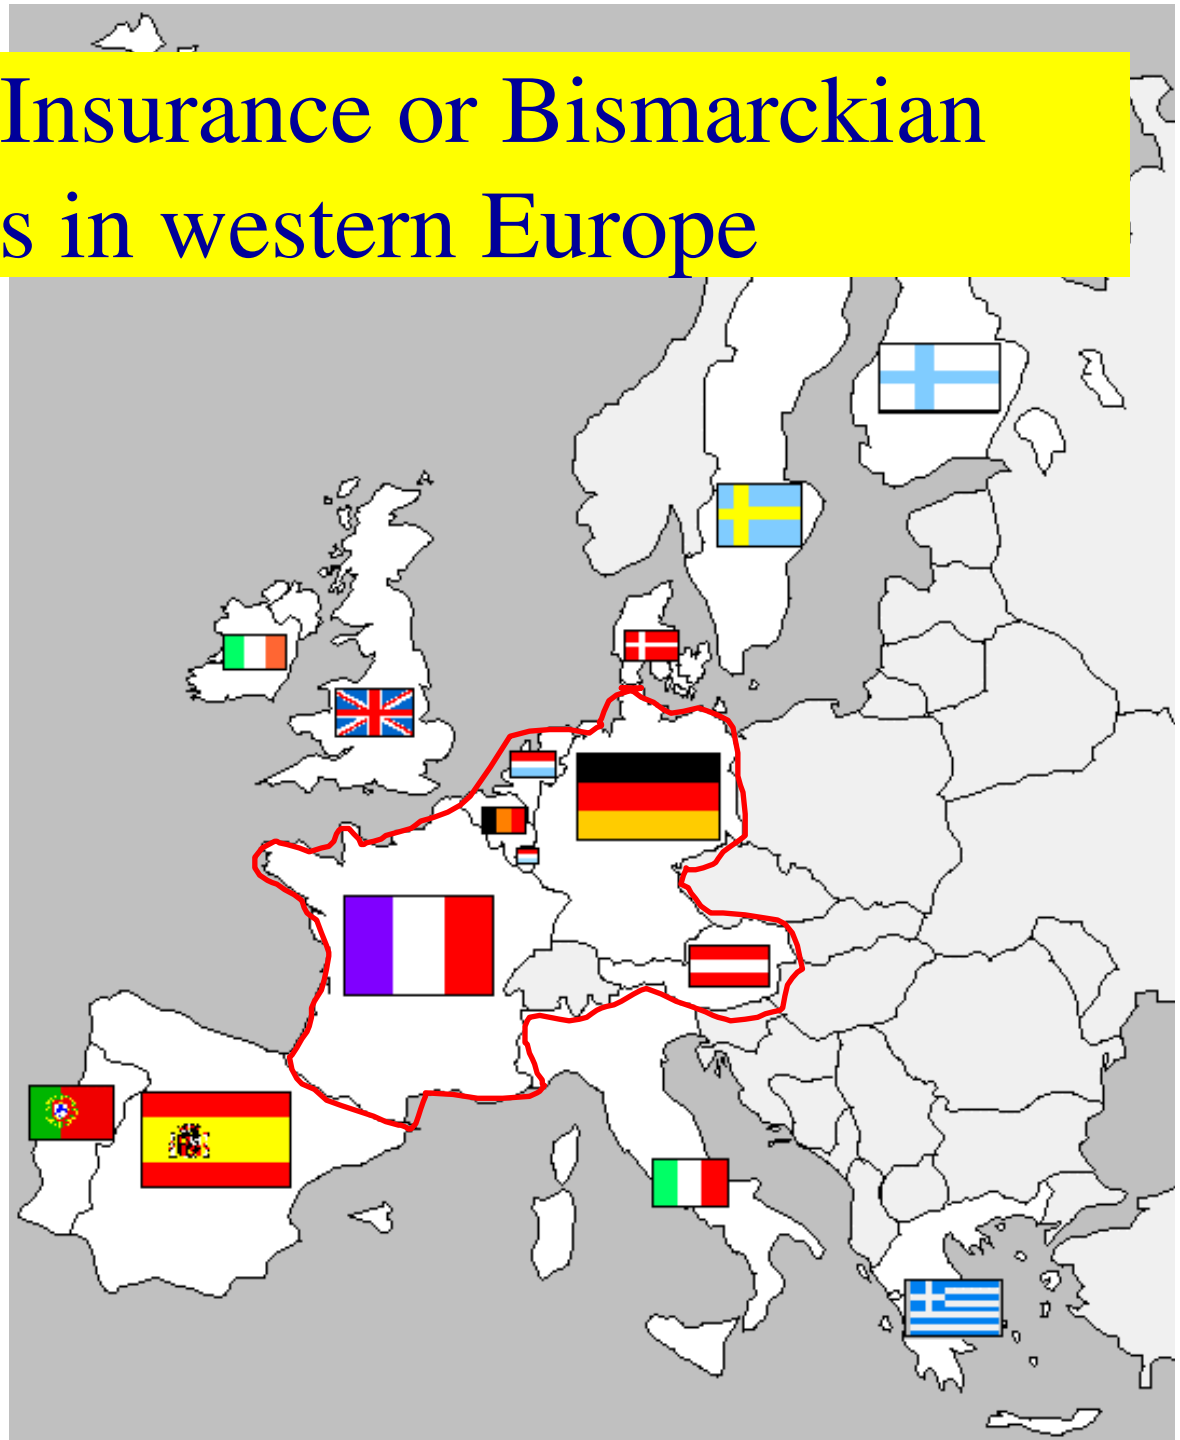

Reinhard Busse, Prof. Dr. med. MPH

**Professor of Health Care Management,
Technische Universität Berlin**

**Associate Research Director,
European Observatory on Health Care Systems**

Social Health Insurance or Bismarckian countries in western Europe

- SHI definition
- Commonalities and variations between countries
- Analysis regarding impact on health status, efficiency, equity, satisfaction ...
- Conclusions for CEE countries

What makes a health system a SHI system?

Contribution collector

Not (health) risk-, but usually wage-related contribution

Choice of fund

Third-party payer

= sickness funds

bipartite self-government

Limited government control

Contracts

Free access

Population

Mandatory insurance

Providers

Public-private mix

- 100% population coverage in Austria, Belgium, France, Luxembourg, Switzerland (since 1996!)
- 75% mandatory and 13% voluntary coverage in Germany (choice between SHI and PHI)
- 65% coverage in Netherlands (no choice!)

- Government (Netherlands)
- Social security agency (Belgium)
- Union of sickness funds (Luxembourg)
- One sickness fund for all (France)
- Individual sickness funds (Austria, Germany, Switzerland)

- Pre-determined membership in Austria, France, Germany (until 1995) and Luxembourg
- Free choice of fund in Belgium, Netherlands (1993-), Germany (1996-) and Switzerland:
in Germany relatively high movement and de-mixing of risks!

- Uniform rate in Austria, Belgium, France, Luxembourg and Netherlands (+ differing per-capita premium); differing rate in Germany; per-capita premium in Switzerland.
- Contribution cap in Austria and Germany but **not** in Belgium and France.
- France: change from income-related contribution (6.9%) to tax on total income (6%), *i.e. relief for wage-earners*.
- In the Netherlands, privately insured subsidise SHI, in Germany not.

- allocation (Belgium, Netherlands) or re-allocation (Germany, Switzerland) – *the latter is more difficult as sickness funds view money as „theirs“*
- area of allocation: nation vs. region (Switzerland), degree of retrospective compensation (not in Germany and Switzerland), differing factors in the formulas (e.g. region in NL), different types of expenditure included, use of high-risk pool

- all SHI systems are traditionally multi-payer systems – problem: weak cost-control
- solutions: budgets – via state (Austria, France) or collective contracts
(problem: contradict competition between funds)
- Netherlands: collective contracts will be illegal – but: funds hardly use selective contracts and reimbursement at lower than maximum rates

- Free access = feature of SHI systems (except NL): Gatekeeping = more effective, cheaper, but less popular?
- Attempts in the Netherlands to separate “core” benefits from others (to be paid for privately) has failed: dental care was partly re-introduced; not covered services make up only 3% of expenditure

Other SHI system characteristics

- ***Solidarity***: set of four cross-subsidies on the funding side (healthy to sick, well-off to less-well-off, young to old, and individuals to families) that provide equal benefits on the entitlements side.
- ***Pluralism***: a complex mix of different public, quasi-public, not-for-profit, and sometimes for-profit actors.
- ***Participation***: shared governance among these actors, sometimes described as “self-regulation”.
- ***Choice***: insurees’ ability to select among contracted providers and, in some countries, among different sickness funds.

SHI: expensive and resource-intensive

SHI more responsive and citizens more satisfied

Efficiency: SHI = better outcomes for more money

	Health		Responsiveness		Faire financing (25%)	Goal attainment	Health expend./capita	Efficiency („Performance“)	
	Level (25%)	Distrib. (25%)	Level (12,5%)	Distrib. (12,5%)				Level health	overall

other	16	17	24	24	24	20	20	24	18

Stewardship and accountability

- Stewardship role for government complicated as major health care responsibilities are in the hands of sickness funds
- Sickness funds should be (and usually are) accountable, but only to their insured and regarding the benefits covered (i.e. no broad public health perspective)

Conclusions for CEE countries

- SHI is clearly much more than a funding mechanism – it is “a way of life“, needing a civil society with e.g. trade unions which is often not (yet) the case in CEE
- from a financial perspective, it is expensive, i.e. requires a certain level of health expenditure
- re outcomes such as responsiveness or satisfaction it is superior to other systems, re health gain similar – overall efficiency (inputs : outcomes) it is equal
- whether the tripartite self-government or the direct governmental control of funds can make it cheaper while retaining the advantages is doubtful
