BIG DATA FOR BETTER OUTCOMES IN HEALTHCARE
public lecture and panel discussion

Dr Jem Rashbass  Keynote lecture
Public Health England
Technische Universität Berlin
9th October 2017 17:30 – 19:00

The big data revolution promises transformational potential for healthcare through data-driven improvements in research & development, care delivery, and policy-making. As health systems around the world routinely collect a wealth of data every day, we are facing the question: how can we use big data to improve patient’s lives? In a public lecture, Dr Jem Rashbass (National Director Disease Registration and Cancer Analysis at Public Health England) will outline how health systems can turn big data into information. A high-profile panel will comment on how this information can be put to use, implications of big data for healthcare system transformation, and patients' perspectives on the collection and use of highly personal data.

Panel
Josep Figueras (European Observatory on Health Systems and Policies)
Dipak Kalra (European Institute for Health Records)
Isabelle Manneh-Vangramberen (European Cancer Patient Coalition)

Format
Keynote lecture and panel discussion, followed by audience Q&A.

Please note that the event will be held in English language. Unfortunately, we are not able to provide a translation service.

This event is organised the BDxBO DO-IT Project that has received funding from the Innovative Medicines Initiative 2 Joint Undertaking (JMI2) under grant agreement No. 116055. This Joint Undertaking receives support from the European Horizon 2020 research and innovation programme and European Federation of Pharmaceutical Industries and Associations (EFPIA).
